Dear Executive Team,

I am contacting your corporate development desk regarding an unannounced, high-leverage digital asset infrastructure portfolio currently available for full strategic buyout or structured institutional acquisition via the World Blockchain Bank Group.

Following the conclusion of a private notification window extended directly to Meta Platforms' executive board in May 2026, we are formally offering 100% control of the root Web4 financial identity namespaces for the entire Meta ecosystem on the open market.

Portfolio Asset Summary (108 Operational Registry Nodes):

Root Communication Nodes: Absolute cryptographic private-key control over the virtualized root endpoints for **facebook.com** (Token #5637), **whatsapp.com** (Token #3899), and **meta.com** (Token #1992). Plus root identities for **.FACEBOOK, .WHATSAPP, .META, with the potential to create billions of sub-identities and financial payment gateways.**

Embedded Clearing Infrastructure: Pre-minted, production-ready non-custodial merchant banking switches, including **facebook.pay, whatsapp.pay, meta.pay, and metaverse.wallet.**

Machine Economy Isolation Layers: The complete automated execution architecture designed to capture machine-to-machine commerce, including **facebook.agents, whatsapp.agents, and meta.aiagents.**

The Moat & Transaction Finality:

Unlike traditional Web2 domains subject to discretionary corporate oversight or ICANN administrative overrides, these assets run natively on self-executing Polygon blockchain bytecode. Operating under the Registry-Anchored Legal Identity (RALI™) protocol, they establish a deterministic, first-come, first-served infrastructure layer that enables the holder to route flat-rate global transaction clearing ($0.50 via WorldBankPay™ / $0.02 via AgentsPay™) completely insulated from legacy banking aggregates or centralized account freezes.

The entire asset package is backed by our active U.S. Department of the Treasury FinCEN MSB Registration (No. 31000286291846) and global D-U-N-S® identity indexation, with all ledger history fully insulated under the international treaty protection of the World Arbitration Court (WAC) in The Hague, Netherlands.

Our technical briefing, proof-of-execution summaries, and live ledger tracking data can be reviewed directly at our press hub:

APPENDIX A: THE META COMMERCIAL STEWARDSHIP VAULT

- **Live Audit Node:** https://www.domainlink.world/meta

- **Total Verified Ecosystem Assets:** 108 Pre-Minted Root and Sub-Identity Checkpoints (including settlement.meta, treasury.meta, and agent.billing.meta).

- **On-Chain Verification:** Token parameters indexed live via PolygonScan and BscScan registries under active FinCEN Money Service Business (MSB) frameworks.

- **Institutional Status:** The formal 30-day technical, legal, and treasury diligence window originally extended to Meta Platforms Inc. has expired. The 50-Year Exclusive Commercial Stewardship Layer and 80% transaction yield matrix are completely unlocked for strategic acquisition by external sovereign buyers, competing technology platforms, or alternative capital networks.

Imposing an Infrastructure Tax on a Rival

The structural error of legacy big tech was relying on centralized operating system perimeters. By failing to secure their Web4 financial identity namespaces before the expiration of our May 2026 board-level option window, Meta remains completely exposed to an inverted network tax. Any competitor that acquires the 108-node root portfolio can now drop our flat-rate clearing bytecode directly across the meta.pay and whatsapp.agents endpoints, forcing centralized models to pay an intermediate processing markup to route automated machine commerce.

We are evaluating structured proposals for either a complete buyout of this 108-node portfolio alongside our 40% core infrastructure equity block, or standalone strategic allocations. Please let us know your availability this week to receive our anonymized 2-page institutional brief.

Best regards,

Stephan Schurmann
